

AQUARIUS

– How to spread the messages to the European level?

13 October 2011, Knebel, Denmark

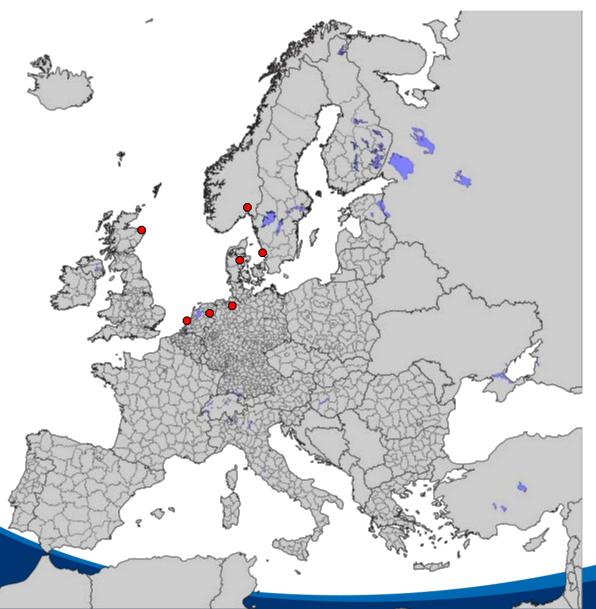

Effective agricultural production adapted to new climatic conditions and environmental demands in the North Sea region.

Matt Nichols

What was the idea of clustering?

Aquarius covers:

9% DK NUTS 3

~10% NSR NUTS 3

~0.5% EU NUTS 3

Good scale for Implementation but.

Funding, partnerships, Experience in the field of environmental technology activities, stakeholder 'Living with water' concept Marine pollutio Input Ballast water and clean ship Biochar application approach Pilot/demonstration Increased awareness New solutions and Studies and knowledge approaches projects Extended networks Preparation for further Strategies, concepts and action plans investment

Improvements in the pilot regions

transnational take-up of solutions

...?

Unlocked investments & actions in regions analysed

Facilitation of change in other related fields

Incorporation of results in regional, national and EU-policies and across the environment and energy sector

Considerable gains in efficiency, climate change, energy technology, water, flooding concepts, carbon emission reduction

future er for a region

Outcome

Results have been demonstrated on local/regional level. What next?

- Benefit to participating regions is a start but not really enough
- If others can achieve same benefit, they should starting with the North Sea Region
- For example, Norwegian pilot achieves ~80% reduction in phosphorous fertiliser pollution. Huge impact if scaled up to North Sea Region. Same for other pilots
- Programme talk = 'Increasing the visibility and take-up of results'
- = What has been shown to work some places should be made to work other places

What do we have at the end of the project?

New techniques

Evidence of success

Policy ideas

Open questions

Unsolved problems

What can we do with each of these resources?

New ideas

Local, regional, national, European, business, academic, special interest organisations etc. etc. Who can make the kinds of changes you want to see?

- Clusters offer something closer to a complete package of solutions rather than specialist fragments
- Wider base of regional partners should offer easier access and overcome 'not invented here' barriers
- Evidence of wide support and success a key European door-opener
- Those who propose solutions are those who have a voice
- The programme can promote clusters much better than individual projects

Whatever you do...

- Start in the middle
- Focus on results not processes
- Update results keep things current
- Ruthlessly edit the irrelevant
- Use web and printed resources as a back-up but do not expect them to reach new target groups
- Become part of the expert crowd
- Have time and resources to be a problem-solver

Have faith in your results!

The European and national levels set policy targets but they are made into reality in the regions.

- You have practical knowledge of what works that is often missing at policy level – use it!
- This is a precious resource if it is presented right
- Watercap should have a very attractive vision, shouldn't it? What would the North Sea Region be like if Watercap approaches were implemented in every region...?
