

1.2 Chemical control of Botrytis fruit rot

Albert Nordmann, OBR Südoldenburg, Langförden

Hans Thöle, berry grower, Bergstrup

treatments 2010

1. control

2. Signum (standard)

- three sprayings during flowering

3. "

- two " "

4. "

- four " "

5. + 6. new chemicals

- three sprayings during flowering

evaluation

determining the percentage botrytis fruit rot in fruit samples of 250 g at different times over the harvest period

Chemical control of botrytis fruit rot 2010

treatments : 1) 09.06. 20 %open flowers, BBCH 62, 2) 15.06. 60 %open flowers, BBCH 66, 3) 23.06. 90 % open flowers, BBCH 67, 4) 30.06. end of flowering, BBCH 81, planting distance 3,25 x 0,4 m, cultivar Tulameen, planting year 2006, 6 m per plot, 4 replications, fruit samples 250 g per plot
