

ANNUAL MEETING 2011 VISITORS

AND THEIR WISHES FOR BWT AFTER THE NSBWO PROJECT

'Better linkage between the marine biologist, scientist and engineering community on this subject'

'Develop good systems that are not only technically but also environmentally sound'

'Enhance general awareness in the maritime sector'

'More port representatives, more shipowners, more practical approach and discussion needed'

'More scientific discussion'

'Share information'

'Having the criteria for putting safe treatment systems on the market'

'Knowledge of control and electronic measurement'

'BW board for North Sea region with network across the world'

'How will enforcement be implemented by PSC?'

'Next to specialised workshops also more presentations by participants'

'Amount of information generated in this project is quite pronounced and more than expected!'

'Knowledge will be at a higher level'

'Better focus on chronic health & environmental effects of Ballast Water'

'Get a better understanding of inert gas in relation with BWT'

'Having a practical approach to help industry in making choices'

'More information on what people do (progress reports) and initiatives like this'

'Broader insights for beginners, esp. information. Information on other people's profession. Explain to non-biologist what plankton etc. is. Explain to non-biologist the BWM convention'

'Need to develop the methodology to find "step by step" for harmonisation of BW related problems'

'More opportunities to get together, listen to each other to identify institutes which could be joined with'

'Harmonised and protective risk assessment for chemicals will be accepted in all IMO countries'

'Strong network of different stakeholders'

'International harmonisation and standardisation, step by step consensus'

'Get ship owners moving to install BWT systems on board, based on uniform interpretation of rules and regulations'
